

# Trend Micro™ Worry-Free™ Business Security Services Integration with Windows Server 2012 Essentials

## Trend Micro™ Worry-Free™ Business Security Services

Worry-Free Business Security Services is a cloud-based security solution that provides protection anytime and anywhere for your business data. Worry-Free Business Security secures Windows, Android, and Mac devices such as point-of-sale machines and tablets.

With most of the security components hosted on Trend Micro data centers, all you have on your computers is the fast, light, and accurate scanning technology that keeps you and your critical business data safe.

## Windows Server 2012 Essentials

Ideal as a first server for small businesses with up to 25 users, Windows Server 2012 Essentials provides a cost-effective and easy-to-use solution to help protect data, organize, and access business information from virtually anywhere; support the applications needed to run a business; and quickly connect to online services.

## Trend Micro™ Worry-Free™ Business Security Services Integration with Windows Server 2012 Essentials *continued*

### **Integrated Management**

Using the management dashboard add-in for Windows Server 2012 Essentials, you or your outsourced IT manager can centrally control the security of all machines in your company regardless of where they are connected. The management interface is accessed via the Windows Server 2012 Essentials dashboard, even though management components and software are stored in the cloud.

### **Improving Server and Staff Performance**

Because the security server is cloud-based, it gives you an advantage over traditional security software for businesses. You retain all of the control and visibility of a traditional solution but without the burden of server software locally installed. This can free up hard drive space, RAM, and processor utilization, as well as offloading the tasks of patch management, software upgrades, and virus database management. All of these are handled 24x7 by Trend Micro experts in secure Trend Micro data centers.

As an added benefit, Worry-Free Business Security Services includes website filtering on each protected machine. This allows you to administer web usage policies from your central management console. These policies apply on all machines, regardless of whether they are on the company network, roaming the world, or connecting from an employee's home.

For more information on Worry-Free Business Security Services and how they can add value to your Windows Server 2012 Essentials installation, please visit: [www.trendmicro.com/sbserver](http://www.trendmicro.com/sbserver)
